---

Hello, I was at the Museum on 21 Hwy yesterday and noticed a number of pine trees beside the building completely covered in Gypsy Moth egg masses as shown. Each egg mass will produce between 500 - 1000 caterpillars. As council feels each land owner is responsible for their own properties, I would like to know what Lambton Shores and Lambton County is doing on their properties to control the upcoming infestation next spring and promote good neighbourly relations. Surrounding residents need to know what they will be facing if no action is taken. Instead of spending \$10,000 on mail out leaflets which are of little use, please spend this money on combatting this infestation by aerial spraying tree's you are responsible for and passing a bylaw to make it easier for home owners to also aerial spray.
